CONTENTS

PREFACE

1. INTRODUCTION
 - 1.1 Why Study Indigenous Systems?
 - 1.2 Why Study the Indigenous Built Environment?
 - 1.3 A Structure for the Study
 - 1.4 Climate and the Indigenous Built Environment
 - 1.5 The Climatic Study

2. INTRODUCTION TO OMAN

- 2.1 General Information
- 2.2 Regional Breakdown. (Chart)

REGIONAL SURVEY AND ANALYSIS

3. BATINAH COAST

- 3.1.1 Physical Description
- 3.1.2 Climate
- 3.1.3 Socio-Economic factors
- 3.1.4 Materials
- 3.2.1 Settlement Patterns
- 3.3.1 (Social Influence on Room Use). House Form
- 3.3.2 (Climatic Factors). Climate and House Form
- 3.3. Materials: Barasti

4. NORTHERN UPLANDS

- 4.1.1 Physical Description
- 4.1.2 Climate Introduction
- 4.1.3 Socio-Economic
- 4.2 Settlement Patterns
- 4.2.1 Climatic Response of Settlement Patterns
- 4.3.1 House Form

5. DESERT-OASIS

- 5.1.1 Introduction. Buraimi Oasis
- 5.1.2 Oasis Climate
- 5.2 Settlement Patterns
- 5.3 House Form and Materials

6. CAPITAL REGION

- 6.1.1 Physical Description
- 6.1.2 Climate
- 6.1.3 Social-Economic Factors
- 6.2 Settlement Patterns
- 6.3 House Form
- 6.3.1 Climatic Influence on House Form

7. SUR

7.1 Introduction

7.1.1 Physical

7.1.2 Economic and Social Introduction

7.1.3 Climate Introduction

7.2 Settlement Patterns

7.2.1 Physical Influences

7.2.2 Social-Economic Influences

7.2.3 Climatic Influences on Settlement

7.3 House Form

7.3.1 Social and Economic Influences

7.3.2 Climatic Influences on House Form

7.3.3 Materials and Technology

8. DHOFAR COASTAL PLAIN

8.1 Introduction

8.1.1 Physical Description

8.1.2 Social-Economic Situation

8.1.3 Salala Climate

8.1.4 Materials Introduction

8.2 Settlement Patterns

8.2.1 Physical Influences

8.2.2 Climatic Influences

8.2.3 Social-Economic Influences on Settlement

8.3 House Form

8.3.1 Evolution and Social Influences

8.3.2 Climatic Response in Building

8.3.3 Materials

9. PROPOSALS INTRODUCTION

9.1 On Development

9.2 On the Built Environment

9.3 Specific Proposals

9.3.1 Materials and Technology

9.3.1.i) Structural Standards

ii) Mud-Brick

iii) Limestone

iv) Barasti

v) Indigenous-Imported Materials Comparison (chart)

vi) Roofing

9.3.2 Health Standards for Dwellings

Climate and Hygiene

9.3.2.i) Wind-Catchers

ii) Windows

iii) Water-supply

iv) Waste-disposal

v) Food-selling

vi) Cooking Areas

9.3.3 Conclusions

LIST OF ILLUSTRATIONS

SECTION 1

- Fig 101 Drawing by Nizwa school boy (Salim)
Photograph of Salim's house
- Fig 102 i Indigenous rural housing in Maladah
ii Wali's house in Izki
iii Recent building, such as Wali's new house in Nizwa
- Fig 104 Heat loss by convection and radiation at various air velocities
- Fig 105 Sample of climatic data chart
- Fig 106 Solar Chart
- Fig 107 Solar Chart with temperature overlay

SECTION 2

Map of Oman

Regional chart: economic base, climate and indigenous materials

SECTION 3

Batinah Coast; location in Oman

- Fig 301 Map: Batinah Coast
- Fig 302 Climatic Data Chart, Azaiba
- Fig 303 Solar Chart, Azaiba
- Fig 304 Micro climate comparison, Sohar: charts
- Fig 305 Map of Sohar and Section of Beach. Land/Sea breezes
- Fig 307 Linear Beach Housing: Sohar. Plan
- Fig 308 Sohar town centre. Plan
- Fig 309 Diagrammatic site plan: Falaj al Qabael
- Fig 310 Section: Falaj al Qabael
- Fig 311 Section: Maladah
- Fig 312 Diagrammatic site plan: Maladah

- Fig 313 House of Moh'd Sherif Abdullah: Sohar
- Fig 314 Photograph: Barasti house at Om el Boche
a. Before addition of Winter screen
b. After
- Fig 315 Plan: House at Maladah showing different rooms used at different seasons
- Fig 316 House of Moh'd Sherif Abdullah: Sohar: Winter and Summer Halves
- Fig 317 Summer house of Ben Darwiche: Magisse
- Fig 318 Winter house of Ben Darwiche: Magisse
- Fig 319 Photograph: Winter Village: Falaj al Qabael
- Fig 320 Photograph: Summer settlement in date garden
- Fig 321 Section of Barasti house showing ventilated shelter. Photograph of same
- Fig 322 Passage way house: Plan
- Fig 323 Passage way house: Section
- Fig 324 Passage way house: Photograph
- Fig 325 Photograph: Two storey Barasti House: Musana'a
- Fig 326 Section: Two storey Barasti House: Musana'a
- Fig 327 Plan: Two storey Barasti House: Musana'a
- Fig 329 Plan: House of Moh'd Abdullah. Beach: Sohar
- Fig 330/1 Sections: House of Moh'd Abdullah. Beach: Sohar
- Fig 332 Photograph of Interior: House of Moh'd Abdullah. Beach: Sohar
- Fig 333 Plastered Badgir
- Fig 334 Cloth Badgir
- Fig 335 Plastered Badgir. Air movement at 16.00 hrs.
- Fig 336 Plastered Badgir. Air movement at 07.00 hrs.
- Fig 337 Cloth Badgir. Air movement at 16.00 hrs.
- Fig 338 Cloth Badgir. Air movement at 07.00 hrs.
- Fig 339 Photographs. Cloth and Plastered Badgir
- Fig 340 Photographs. Bastakia area of Dubai: Badgir
- Fig 341 Photograph. Tension testing machine

- Fig 342 Photograph. Compression testing machine
- Fig 343 Tension: Dry and Wet tests: graphs
- Fig 344 Compression: Dry and Wet tests: graphs
- Fig 345 Photographs: Compression tests
- Fig 346 Photographs: Wet barasti: compression
- Fig 347 Bending: Dry and Wet tests: graphs
- Fig 348/9 Photographs: Behaviour under loading
- Fig 350 Photographs: Barasti pitched roof room
- Fig 351/2 Construction of Barasti pitched roof house
- Fig 353 Photographs: Pitched roof construction
- Fig 354 Construction of Barasti flat roof house
- Fig 355/8 Photographs: Barasti panel types
- Fig 359 Barasti House: Om el Boche: Floor Plan
- Fig 360 Barasti House: Om el Boche: Roof Plan
- Fig 361/6 Internal and external contact temperature charts.
Mud Brick, Barasti, Concrete Block. September and December
- Fig 367 Photograph: Thermal conductivity evaluation equipment
- Fig 368 Difference in daily temperature range of internal wall
surfaces due to different Barasti wall thicknesses
- Fig 369 External surface conductance of Barasti walls related to
air movement
- Fig 370 Daily range of external surface temperatures for sheltered
south-east facing wall
- Fig 371 As above but exposed to air movement
- Fig 372 Photograph: Exterior view of Barasti Screen
- Fig 373 Photograph: Interior view of Barasti Screen
- Fig 374 Photograph: Exterior view of Mushrabeya Screen
- Fig 375 Photograph: Interior view of Mushrabeya Screen
- Fig 376 Photograph: Barasti Screen: ability to focus beyond
Screen when light outside is subdued
- Fig 377 Photograph: Mushrabeya Screen: as above

- Fig 378 Photograph: Barasti Screen
- Fig 379 Photograph: Mushrabeya Screen
- Fig 380 Termites: drawing
- Fig 381 Photograph: Post destroyed by termites
- Fig 382 Photograph: Subterranean termite attack on Barasti Stem
- Fig 383 Photograph: Dry wood termite attack on Barasti

SECTION 4

Map: Northern Uplands location in Oman

- Fig 401 Map of Northern Uplands (Nizwa area)
- Fig 402 Climate data chart: Izki
- Fig 403 Solar Chart: Izki
- Fig 404 Effect of Valley winds modified by daytime upslope and
nighttime downslope local winds
- Fig 405 Settlement Pattern: Nizwa
- Fig 406 Schematic section through Al Hamrah
- Fig 407 Winter House in town: Nizwa
- Fig 408 Recently built concrete block house in indigenous form
- Fig 409 Summer House in date garden
- Fig 410 Photograph: Winter House in Nizwa
- Fig 411 Photograph: Summer House in date garden
- Fig 412 Settlement pattern: Odeya
Photograph: Odeya House

SECTION 5

Map: Desert/Oasis (Buraimi) location in Oman

- Fig 500 Map: Buraimi area
- Fig 501 Climatic data chart: Fahud
- Fig 502 Climatic data chart: Buraimi

- Fig 503 Solar Charts: Buraimi
Fig 504 Settlement Pattern: Buraimi

SECTION 6

Map: Capital Region location in Oman

- Fig 601 Map of Capital Region
Fig 602 Climatic Data Chart: Muscat
Fig 603 Solar Charts: Muscat
Fig 604 Settlement Pattern: Muscat
Fig 605 Photograph: Muscat
Fig 606 Photograph: Mutrah
Fig 607 Photograph: Muscat: surrounding hills prevent extension of settlement
Fig 608 Photograph: Mutrah corniche
Fig 609 Section of typical courtyard town House. Muscat Climate response
Fig 610 Mutrah Town House on Bay front
Fig 611 Window details: Nizwani House - Mutrah
Fig 612 Lattice windows from houses in Muscat town centre
Fig 613 Bait Mughub: Muscat: Window detail incorporating evaporative cooling system

SECTION 7

Map: Sur's location in Oman

- Fig 701 Map: Sur and neighbourhood
Fig 702 House on Sur beach
Fig 703 Sur harbour area
Fig 704 Climatic Data Chart: Sur
Fig 705 Settlement Pattern: Sur
Fig 707 Photograph: Fish sellers' temporary stalls

- Fig 708 Suq area: temporary stalls erected in open
- Fig 709 150 year old limestone courtyard house in Sur centre
- Fig 710 House of three brothers. Sur town centre concrete block.
Plan and Section
- Fig 711 Photograph: Barasti used in a window opening to form a
lattice
- Fig 712 Louvres ensure visual privacy but allow air movement:
Diagram
- Fig 713 Photograph: Mechanized carpenter's workshop in Sur
- Fig 714 Photograph: New, locally made door on Indian Model
- Fig 715 Photograph: Old Door
- Fig 716 Photograph: Barasti House construction
- Fig 717 Photograph: Panels can be rolled and stored

SECTION 8

Dhofar Coast location in Oman

- Fig 800 Map of Dhofar Coast
- Fig 801 Climatic Data Chart: Salala
- Fig 802 Solar charts with temperature overlay: Salala
- Photographs: i. The high quality of the Indigenous
architecture of the Salala region
ii. One of the oldest town houses in Salala
- Fig 803 Settlement Patterns: Salala
- Fig 804 Air flow around building in Salala Old town centre
- Fig 805 Salala town centre
- Fig 806 i. Refugee settlements
ii. Early Government solution to refugee problem
- Fig 807a-e Evolution of the Courtyard town house
- Fig 810a-f Interior and exterior contact temperature graphs for
limestone, mud-plastered Barasti and concrete block rooms.
October and January.
- Fig 813 Courtyard House in Salala: Plans

- Fig 814 Climatic response of Salala Courtyard house
- Fig 815)
Fig 816) Problems due to limestone bedrock: sewage
- Fig 818 Photograph: Deep cuts are made by driving pikes down into the limestone bedrock
- Fig 819 Photograph: Blocks are broken off
- Fig 820 Photograph: Limestone cutting machine on track
- Fig 821 Photograph: The machine cuts parallel lines - then lines perpendicular to these
- Fig 822 Photograph: Block is cut horizontally using the traditional method
- Fig 823 Photograph: The track must be moved manually after every cutting run of the machine
- Fig 824 Drawing: Improved planting in old quarry sites
- Fig 825 Traditional wall construction
- Fig 826 Recent wall construction "Locking Stones"
- Fig 827 Mausoleum: Salala
- Fig 828 Nourah: Lime Burning Kiln - pit
- Fig 829 Roof section
- Illustration: Barasti School: Salala
- Fig 830 Hardwood posts are driven into the ground and horizontal members tied across
- Fig 831 Detail showing system for tying basic structure together
- Fig 832 Coconut palm frond stems inserted into voids in structure
- Fig 833 Section showing Banasti wall panel
- Fig 834 The basic roof structure is pre-assembled on the ground
- Fig 835 The roof is post tensioned and tied when in place
- Photographs examples of Banasti and mud plaster

SECTION 9

Proposals

- Fig 927 Washing facilities
Washing area designed by Professor Hassan Fathy
Washing area in Nizwa summer house
- Fig 929 Cooking areas. Raised platform for storing food
- Fig 930 Typical facilities for cooking in existing rural houses
- Fig 931 Food storage cooling unit
- Fig 932 Store unit designed by Professor Hassan Fathy
- Fig 933 Indian Chulna : Cooker burning dry fuels
- Fig 934 Pit privy sewage disposal system
- Fig 935 Compost privy
- Fig 936 Water seal latrine
Typical layout of septic tank system
- Fig 937 In densely settled areas waste water disposal and drainage
should be dealt with on a community level
